The Christmas Flower

Holiday Chemistry - Make a pH indicator from poinsettia leaves!

Scientists use their observation skills to collect and record data during experiments. They can either use their senses or use tools such as magnifying glasses and microscopes to collect it. Any data recorded during an experiment can be called an observation.

Observe and record the colour changes below!

Name of Liquid/ Solution	Colour BEFORE indicator is added	Colour AFTER indicator is added	Acid, Neutral or Base?
×			

Colour change using poinsettia liquid as an indicator:

Acid = Bright red
