Favourite Dino Research

A. T-Rex

Tyrannosaurus

tie-RAN-oh-sore-us

RELATED FACTS

- Height: 3.5 metres to 6 metres tall
- The T-rex grew to around 12 metres long. (The length of 3 cars or a very large bus)
- It had 2 legs, and 2 arms that were very tiny compared to the rest of body.
- It was a carnivorous dinosaur, which means that it only ate meat.
- It lived in humid, and semi-tropical temperatures. Think of a very sticky and hot August day in Malta but with a lot more rain.

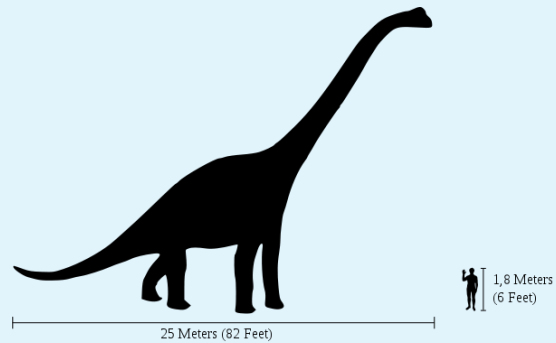

B. Brachiosaurus

BRAK-ee-oh-sore-us

RELATED FACTS

- Its neck could reach up to 9 metres in length. This means it could reach the roof of Esplora easily with its head.
- Its total body length was around 30 metres.
- The Brachiosaurus had 4 strong legs. It had 2 long legs as part of its upper body and 2 shorter legs that were part of its lower part (back).
- They had a very big jaw with spoon-shaped teeth, that helped them to pull off the leaves from the top of trees. They were herbivores, just like rabbits they only eat plants and leaves.

C. Pteranodon

ter-AN-o-don

- Unlike birds, its wings were not made of feathers, but of skin.
- It had a wingspan that ranged from 2.7 to 6 metres.
- This flying creature had 2 legs.
- Pteranodons were also carnivores, they loved eating fish, crabs, insects and other animals.

Which was your favourite Dino, and why?

- Total number of students voting for Dino A: T-Rex _____
- Total number of students voting for Dino B: Brachiosaurus _____
- Total number of students voting for Dino C: Pteranodon _____
